1 PART 1: RUNNING TIME ANALYSIS

1.1 Total Cost of Algorithm

I found costs for all units in the algorithm given below. Then calculated total cost as $c1 + (n+1)c2 + n*c3 + n*(n+1)*c4 + n*n*c5 + n*n*c6 + n*c7$. The tilde notation for that algorithm is $n*n$

	Unit Cost	Times
$j := n$	$c1$	1
while $j \geq 1$ do	$c2$	$n+1$
begin		
$i := j$	$c3$	n
while $i \geq 1$ do	$c4$	$n(n+1)$
begin		
$x := x + 1$	$c5$	$n*n$
$i := \text{floor}(i/2)$	$c6$	$n*n$
end		
$j := \text{floor}(j/2)$	$c7$	n
end		

1.2 Measurement Of Runtime
